

Summary (Gokul's Programming Test)

This programming test was made in total of 14 Hours

- Base classes made in C++.
- Rest of the things are made in Blueprints. ("Due to time constraints.")
- Used Vector classes for movement of runtime location Gizmo
- Rotation Gizmo is only half done hence not activated.
- Highlighting objects works and is using Post process volume (Custom depth)

Thank you for giving me this opportunity and it means a lot to me, although due to time constraints I couldn't complete rotation gizmo and scale gizmo and other things I wanted to implement.

Thank you for your understanding, patience & time.
